

5 Benefits of Cloud Connected Inspections

When your inspection equipment can connect to each other and the Cloud, it opens the door to new possibilities that can transform your inspection process. Expand your capabilities with these 5 benefits of using the EPOCH® 6LT flaw detector with the Olympus Scientific Cloud.

1. We've got your back (up)

- Store backup data on the Cloud in case of device theft or failure
- Instantly backup data at the push of a button
- Multiple GB of free data storage
- Open file format for added flexibility

3. Keep your data secure

- Advanced security features and data centers all over the world help ensure that user data is stored locally and securely
- You retain ownership of your data, even if you close your Olympus Scientific Cloud account

2. Minimize downtime

- Cloud data helps make factory service faster and more efficient
- Service technicians know when each component was last checked to optimize the service process and get your device back to you as quickly as possible

4. Streamline collaboration

- Maintain a shared database of calibration files that are easily accessible
- Field techs can share data files to verify results and save time

5. Stay on the leading edge

- Seamless firmware updates from the field
- Managers can monitor the software version on all of their instruments
- New software updates available from the instrument UI
